OnDemand World Observatory

Context-conditioned short video
for every observation-page opening

M.K. Hsu
Creator AI / Battlefield Lightning / Global Online Track

28 October 2026

Repeat visits need fresh moments

Creator

A rich world setting and reference art already exist. Manually writing every new scene takes effort.

Visitor

A fixed gallery repeats the same moments. An open-ended prompt editor asks the visitor to do the work.

Proposed value

A new observation on opening, bounded by the creator's world rules and visual identity.

Initial customer hypothesis: independent worldbuilding creators and small IP teams

The proposed observation flow

01 **Open page**

02 **Compose scenario**

03 **Generate clip**

04 **Play new result**

Domain + eligible species + time + climate + approved reference images

Fast generation is the intended experience. Backend and latency remain unvalidated.

Creator-defined context and constraints

01 **World facts**

One domain, approved species, visual references and prohibited events.

02 **Context snapshot**

Creator-defined fictional time and climate in the first version.

03 **Coherence checks**

Reject unsupported species or conditions before requesting a video.

A written example

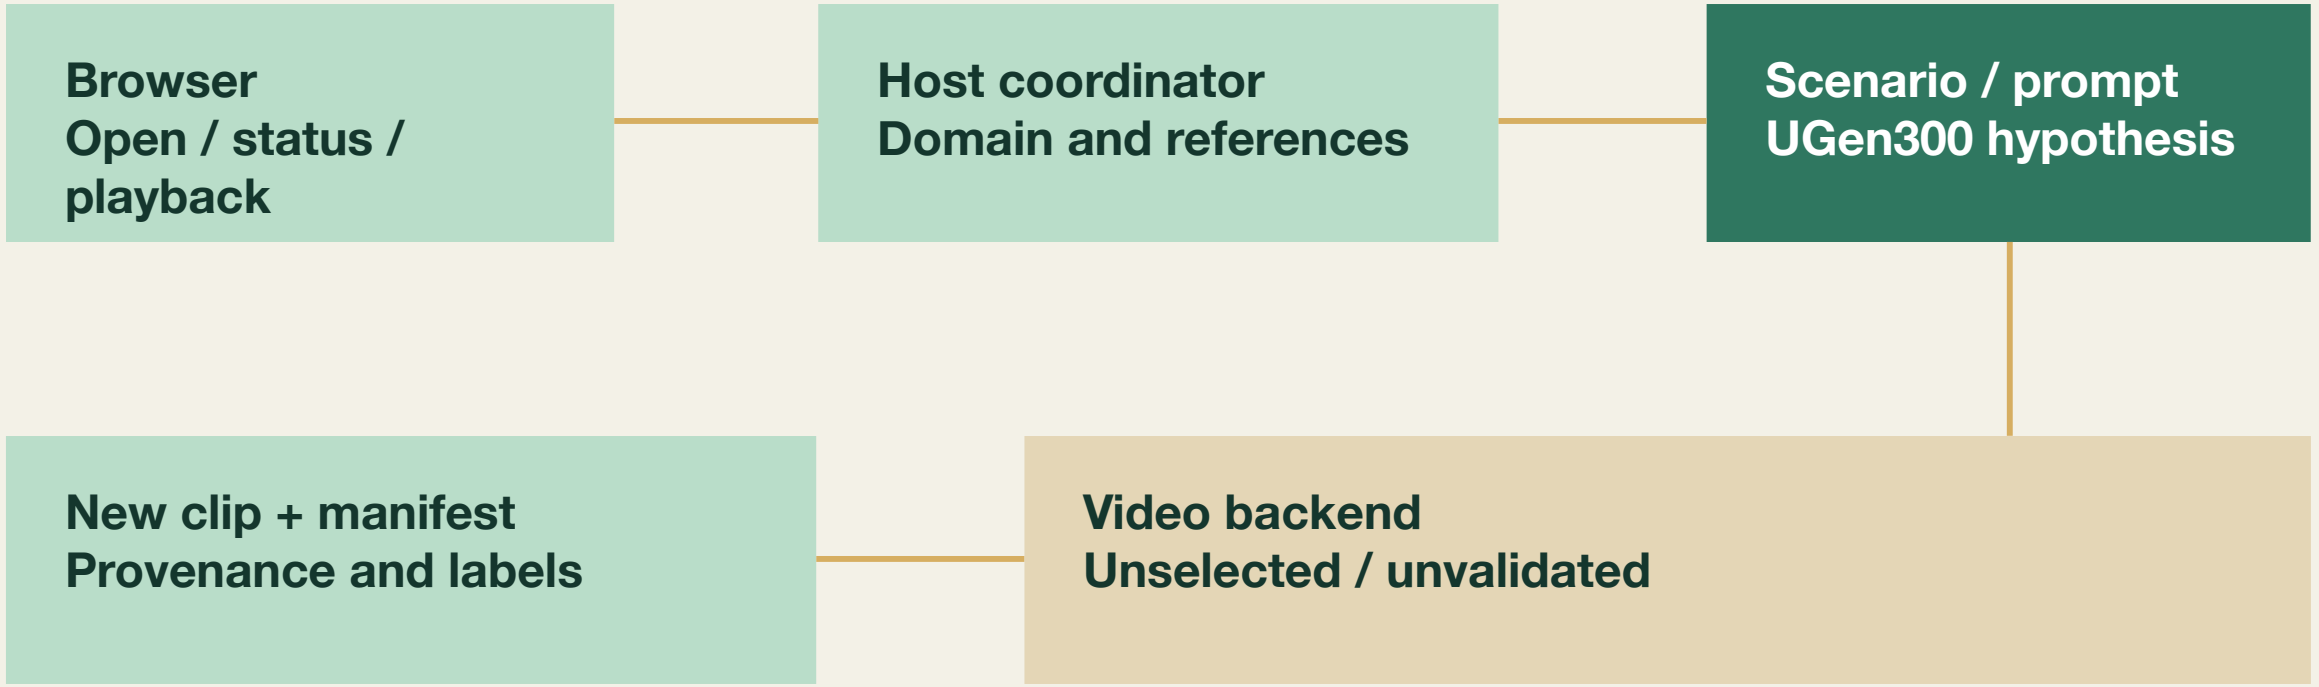

FICTIONAL WETLAND / DAWN / MIST

One approved wading bird takes two slow steps beside reeds. Gentle ripples cross still water.

Prompt direction: preserve the reference anatomy and habitat.
Use a fixed wide camera, subtle motion and no additional species.

Hand-authored sample. No model output, generated clip or measured result.

Proposed software and hardware architecture

The device contribution and the video-generation backend require separate validation.

UGen300 evaluation scope

Candidate role

Context interpretation and constrained scenario / prompt construction using a supported Hailo-10H model.

Compatibility gate

Confirm received device, host OS, drivers, memory and model runtime. USB versus M.2 selection remains pending.

Evidence needed

Actual device operation, model versions, reproducible logs and separate timings for every pipeline stage.

No UGen300 video, latency, power or deployment result exists today.

Prior work and new application scope

Prior public material

K’s Hunting Log
Habitat imagery, species setting and pre-existing video clips

Separate Studio product
Story-to-world authoring context

New proposal work

Page-open observation design
Context and constraint interface
Hand-authored payload examples
Hardware evaluation plan
Proposal, slides and video script

No Studio code copied. Disclosure does not establish originality eligibility.

What exists today

YES

Reviewable application materials

Proposal, editable deck, draft schemas, written examples and a source register.

NO

Operating product implementation

No scenario model, video adapter, generated-on-open page or deployed service.

NO

Hardware and performance evidence

No UGen300 integration, device-generated video, latency or power measurements.

Commercial hypothesis and pilot

First buyer

Independent creators and small IP teams with established worlds

First use case

An observation page linked from an existing world or story site

Possible model

Creator subscription plus metered video use or observation credits

Measure cost per playable clip, retries, visitor return intent and creator effort.

Proposed validation and acceptance gates

Coherence

20 context combinations × 5 requests. Review species, reference identity and forbidden events.

Performance

Measure context, device prompt inference, video backend and total time-to-play separately.

User value

Proposed study: 5 creators and 10 visitors. Compare fixed clips with labeled variations.

Proposed gates: complete provenance, no unapproved species in accepted prompts, honest failures

Stage II development plan

06–13 Nov	Device and model compatibility baseline
14–20 Nov	Context, constraints and device prompt step
21–27 Nov	Eligible video backend and playback integration
28 Nov–04 Dec	Evaluation, actual device capture and final evidence

Eligibility and rights decisions

01 Prior public and similar works

The consent warranty includes similar public works by the same author. No old-material exemption is confirmed.

02 Asset and model permissions

Rights must support the organizer’s use, including commercial use and sublicensing for winning work.

03 Owner-only agreement and signature

The author must review perpetual award licensing and name, likeness and voice terms before signing.

Stage I review package and next steps

Review-ready

14-page English proposal
Draft interfaces and examples
English concept video script
Source and rights register

Owner completion

Eligibility and asset clearance
Legal/contact fields and hardware
Signed consent PDF
Judge access and video link
